

# WHAT IS TELEMEDICINE?

Telemedicine (also referred to as "telehealth" or "e-health") allows our amazing health care professionals to evaluate, diagnose and treat patients from the **privacy of your own home!**

## WHAT VISITS CAN I DO VIA TELEMEDICINE?

- UTI
- Strep Throat
- Colds or Other Minor Infections
- ADD/ADHD
- Psychiatric Issues
- Diabetic Med Check – may need to come by the office for an A1C prior to visit
- Hypertension Follow Up- will need to have a Blood Pressure monitor at home to give us readings
- Dementia Follow Up
- Rashes, Poison Ivy or Other Skin Infections
- Joint Pain or Low Back Pain
- Migraine – if not wanting Toradol shot
- Allergies
- Medication Adjustments

*NOTE: While many of these types of visits can be seen during Telemedicine, your provider may still deem it necessary to come into the office for a better evaluation. If this is necessary, you will not be charged for both the Telemedicine and the office visit.*

*We are also open for any non-routine issues that would require an in-office visit. We are always happy to see our patients in the office but telemedicine offers a great option while you are staying home!*
